EDUCATION

Aug 2024 - Present	University of Texas at Austin Mathematics Expected graduation May 2027	GPA 3.93
Aug 2023 - May 2024	Colorado State University Mathematics and Computer Science	GPA 4.0

SKILLS

Frontend and Backend Development: JavaScript, TypeScript, Next.js, React, Tailwind, MongoDB, Upstash, PostgreSQL, Stripe, Supabase, Node.js, AWS (S3 / RDS / API Gateway / Lambda)

Robotics: Robot Operating System (ROS), Gazebo, RViz, MoveIt, Unity, Unreal Engine, C++, Sockets

Machine Learning and LLMs: Python, LangChain, OpenCV, Pinecone (Vector DB)

EXPERIENCE

Los Alamos National Laboratory Jun 2025 - Aug 2025

High Performance Computing Intern

- Built a socket bridge between a visualization tool and a game engine, enabling real-time streaming of visualization edits from desktop to XR headsets.
- Designed and built an XR headset application that reconstructs large scientific visualizations with natural gesture controls, allowing immersive and intuitive interaction.

Inductive Robotics

Jan 2025 - Mar 2025

Robotics Engineering Intern

- Developed cloud-based data pipelines for ingesting, processing, and analyzing real-world sensor data.
- Built a client-facing dashboard showing traffic patterns to parking lot operators.
- Integrated historical weather data to contextualize analytics.

Human-Aware Planning and Interaction Lab

Sept 2023 - May 2024

Undergraduate Research Assistant

- Paid position leading a project to develop a robot control system using natural gestures via an augmented reality headset (Meta Quest).
- Developed the [lab's website](#) and documentation site using modern web frameworks.

PROJECTS | [Full Portfolio](#) [GitHub](#)

[Flycatcher](#) | Full-stack waitlist page builder

Modern Full-stack development

- Built web app that enables users to quickly design and host waitlists for their projects, track engagement with their pages, design marketing emails, and send communications to subscribers.
- Uses authentication, image uploads, payments, databases, automated emails, and rate-limited APIs.

[Inhouse Tracker](#) | University gaming club leaderboards

- Developed a full-stack platform using Riot Games's OAuth and MongoDB to track custom League of Legends games with automated match ingestion and leaderboards.
- Created an MMR-style ranking system that improves engagement for 50+ club members.
